GEORGETOWN UNIVERSITY
Department of Economics
ICC Building 580, 37th and O Streets, N.W.
Washington D.C., 20057

Placement Director: Toshihiko Mukoyama tm1309@georgetown.edu
Graduate Student Coordinator: Thomas Lewis lewistd@georgetown.edu 202-687-5601

Education

Ph.D program, Economics, Georgetown University, August 2020 – present

- Expected completion: May 2027
- Committee: Prof. Toshihiko Mukoyama (Advisor), Prof. Mark Huggett, and Prof. Ami Ko

M.A., Economics, Korea University, 2020

- Committee: Prof. Jinill Kim (Advisor), Prof. Dongheon Kim, and Prof. Dukpa Kim

B.A., Economics, Korea University, 2017

Research Interests

Macroeconomics; Quantitative Macro; Macro-labor

Dissertation Papers

- **"Family Structure and Youth Employment Instability: Evidence on Job Quality and Match Stability" (Job Market Paper)**

  Abstract: This paper studies how family structure during adolescence is related to employment instability in young adulthood, conditional on observed human capital and household financial resources. Using weekly labor market histories from the NLSY97, I compare workers who lived with a single parent at age 16 with those who lived with two resident parent figures. Data analyses establish three empirical findings: (i) workers from single-parent households experience higher post-school unemployment rate, driven primarily by more frequent separations from employment rather than slower job-finding rates; (ii) workers from single-parent households experience less favorable job-in-wage quality persistently, especially following unemployment; (iii) subsequent higher separation risk of workers from single-parent households remains, even after standardizing wage quality among direct job-to-job transitions. I interpret these facts through a job-ladder model with heterogeneous wage quality, nonwage match value, and latent match stability. In the model, family structure shifts the job-offer distributions of wage quality and match stability. The estimated model attributes most of the aggregate employment-instability gap to reduced access to stable opportunities during employed search. Consumption-equivalent welfare analysis suggests that employment instability of workers from single-parent households is equivalent to permanent 5.8% less consumption compared to workers from two-parent households. ASEP's public-sector hiring policy in Greece and WIOA Youth Program in Prince George's county in Maryland are discussed as examples of existing labor policy targeting workers from single-parent households.

- **"Work-From-Home, Worker Interactions, and Economic Growth"**

  Abstract: This paper applies the dynamic knowledge diffusion model developed by Lucas and Moll (2014) to examine how worker productivity distribution evolves and how long-run growth responds to the shift toward hybrid work environments. In the model, workers differ in their productivity and allocate time between working from home (WFH) and working on-site (WOS). Productivity improves only through learning from higher-productivity workers. I incorporate a learning probability kernel based on relative productivity and empirical rate of returns of face-to-face spillovers to better capture heterogeneity in knowledge transmission. The allocation of time between remote and on-site work determines both the current level of output and the economy's long-run growth path. Through numerical simulations, I characterize the balanced growth equilibrium under various hybrid work intensities. Furthermore, I compare decentralized outcomes with the socially optimal solution that internalizes the positive externalities of knowledge spillovers. The findings contribute to the ongoing policy debate on the optimal design of remote work in the post-pandemic economy.

- **"Housing Policy, Portfolio Risk, and the Home-Purchase Threshold: Financial Risk-Taking among Young Prospective Homebuyers"** (Work in Progress)

Working Papers

- "Effects of Expanding Free-Tuition Policy of Elite Universities in the USA" with Jinxin Wu

Seminars and Conference Presentations

Georgetown University — Washington, D.C., The United States
- AMMEEGO (Annual Macro Meetings at Georgetown), 2026
- Presentation: Family Structure and Youth Unemployment

Georgetown University — Washington, D.C., The United States
- AMMEEGO (Annual Macro Meetings at Georgetown), 2024
- Presentation: Work-From-Home, Worker Interactions, and Economic Growth

Nanyang Technological University — Nanyang, Singapore
- EAUI (East Asian University Institute), 2017 Summer School Program
- Research Topic: Asian Regional Community Building through Transitional Knowledge Exchange
- Collaborated with international scholars on research topics

Research Experience

Research Assistant to Prof. Toshihiko Mukoyama, Georgetown University, Spring 2026
- Prof. Toshihiko Mukoyama's project: "Optimal Innovation under Population Decline: Growth and Firm Dynamics" with Prof. Minsu Chang
- Collected and constructed a state-level panel of demographic, labor-market, and establishment dynamics using data from the BLS and U.S. Census Bureau.
- Supported decompositions of employment growth into establishment entry, exit, and average establishment size.

Teaching Experience

Georgetown University — Washington, D.C., The United States
Econ Principles of Macro, **Teaching Associate**, Summer 2024

Georgetown University — Washington, D.C., The United States
Intermediate Macro, **Teaching Associate**, Summer 2022

Korea University — Seoul, Korea
Macroeconomics Theory, Teaching Assistant for Prof. Jinill Kim, Spring 2019, Fall 2018

Fellowships, Honors, and Awards

Anam Scholarship (Full-Tuition Merit Scholarship), Korea University — 2011 - 2019
- Awarded to the top-ranked entering student in the Department of Economics
- Covered full tuition and provided a monthly stipend for full semesters

Research Assistant Scholarship, Korea University — 2018 - 2019

BK21 Plus Scholarship, National Research Foundation of Korea — 2017 - 2018

Language

Native Korean; Fluent English
